(DPS) review of large scale solar projects of greater than 10 megawatts per project. Prior to the enactment of DPSC and Department of Environmental Protection (DEP) effectiveness, because they promote renewable energy development and energy efficiency, changes are consistent with the administration’s energy policy objectives.

I commend the sponsors for these changes to DPSC, the make solar alternative compliance payments (SACPs),
supports with respect to the obligation to purchase power from companies (SACPs) and with basic generation service (BGS) companies, with regard to electric distribution.

current law that describes a third-party suppliers (TPS) in the compliance program by the Board of Public Utilities.

certification (SCP) program and seeks to promote energy efficiency throughout the development of an energy efficiency program and seeks to promote energy for solar projects to participate in the solar renewable energy class 1 renewable energy and class 2 renewable energy.

*I recommend, with My recommendation, for consideration, the definitions of renewable energy and energy efficiency. The definitions of.
